Confido Health

27th Jan 2026

Overview: Since we met in May, Confido has grown to $4M CARR (at plan), with 2026 projected on $15M CARR (potential to exceed forward)

1. **Founders:**
    1. Chetan Reddy: Co-Founder & CEO | Co-Founder @ BurnCal (2yrs) | Founder & CEO @ DroneNation (3 yrs) | BITS Pilani '17
    2. Vichar Shroff: Co-Founder & CPO | Co-Founder @ BurnCal (2 yrs) | Co-Founder & COO @ DroneNation (3 yrs) | BITS Pilani '17

2. **Context:** Diligenced in May for Series A. Couldn't meet on price for a Z deal but invested via DeVC; Evaluating follow-on.
    1. Series A at $34.5M post led by Blume. Invested additional $1M from DeVC ($2.1M total) and own 6.6%.

3. **Key questions we tracked for the follow-on**:

	Key Question		What's changed
1	**Sustaining top-decile growth** and ability to **move upmarket**	Hit	• **Ended Dec'25 at $4M CARR** – Consistently met projections. Was $1M in May '25; grew 4x since. • **Moving upmarket** – Multiple $100K+ contracts; starting to win $500K+ deals. • **Strong momentum** and increasingly closing larger quarters ($2M in Q4'25). **December alone was a $1M month.**
2	Proving execution by **closing the Live–Contracted ARR gap**	Miss	• **Live ARR $1M vs. $2M plan – Missed** due to team bandwidth and multiple first time EMR integrations (non-standard). • Go-live has recently improved from 8-12 weeks to 4-8 weeks (templatising integrations + increased FDE capacity). *We expect them to improve further with a few product changes in the roadmap.* • 90% of deals since May'25 have minimum guarantees (vs. ~0% before) – More predictable Live ARR

3	**Scaling the team** and organizational readiness	Hit	• **Proving they can hire A+ talent** - Strong L-1 layer with deep domain expertise. Examples:
			  • Raihan Faroqui (VP of Partnerships; ex founder, ex-Guaranteed), Mitchell Stabnor (Director of Marketing)
			  • Gaurav Mohta (Head of Product, ex-Innovacer), Hammond Pereira (VP of Engineering, ex-Dream11)

4. **Projections:** Aggressive plan to hit **$15M by Dec'26**
    1. Q1'26: $6M – high confidence based on pipeline. Q2: $8.5M possible if the same pipeline momentum maintained
    2. Q4 target of $15M requires repeatable GTM across additional channels - PE motion + outbound; and scaling delivery.

5. **Funding:**
    4. $2.9M @ $10M Seed from Together and DeVC; Raised Series A of $9M @ $34.5M post in May '25 from Blume, Together and DeVC
    5. DeVC has invested $2.1M and currently own ~6.6%
    6. Potential to shape $8-10M convertible (20% discount to next round)

1 **Traction:** **Since we met in May '25** Confido has **grown from $1M to $4M in revenue** – hit projections; Increasingly closing larger quarters and **added $1M in Dec '25 alone**

Confido met year end projections of $4M CARR; Since we met in May, they have grown 4x in revenue; From August -> November, Confido was able to repeatably add $500K per month. In December this increased to $1M ARR per month, and have a path to repeatable close this going forward.

	May'25	*Jun'25*	*Jul'25*	*Aug'25*	*Sep'25*	*Oct'25*	*Nov'25*	*Dec'25*
New ARR added	*$150*	*$125*	*$168*	*$468*	*$538*	*$565*	*$306*	*$1,144*
# Customers added	*2*	*3*	*4*	*3*	*8*	*5*	*3*	*7*
Average ACVs (New)	*$75*	*$42*	*$42*	*$156*	*$67*	*$113*	*$102*	*$163*

1 Traction: Steep revenue ramp and successfully moved upmarket with $500K+ accounts; Early signs of the PE channel working

Confido showing a **steep ramp in ARR each quarter &** closed **$2M new revenue in Q4**; They're now moving upmarket and **closing $500k+ accounts – compounding in the enterprise segment**

	Q1	Q2	Q3	Q4
SMB (# logos, Avg ACV)	4 $14,300	5 $41,720	10 $35,000	8 $43,000
MM (# logos, Avg ACV)	3 $1,33,333	2 $1,00,000	4 $1,01,000	6 $1,70,280
ENT (# logos, Avg ACV)			1 $4,20,000	1 $6,49,536

Confido is now saying "No" to all customers that are <$50K in ACVs; ICP is now customers that are $100K and above.

Early signs of Private Equity GTM channel working; Gryphon partners is introducing Confido to their portfolio

PE

Current Confido customers

Potential pipeline of $2M if they introduce to rest of portfolio

Assort is the biggest competitor in this space and they're 3-4 quarters ahead of Confido

As of Aug 2025 – Assort numbers:
1.Trajectory was $0.7 - 9.6M in a year
2.Average ACVs - $130K
3.Live to CARR is 1:4; ~$2.5M live
4.Upmarket motion starting to work: Closed six $500K deals and one $1M CARR deal in the last 2 quarters

1 Traction: Overall strong growth and metrics; Seeing PMF in the enterprise and MM segment + repeatable GTM motion in one channel

Category	Metric	Considerations	Benchmark (Series A)
Revenue	ARR Growth	• **$4M Contracted ARR Dec'25 (at plan) – grown 4x since May '25** • Live revenue @ $1M; lags by 6 months to CARR • **Proven PMF in MM and ENT** – Closing multiple 100K+ accounts and now closing $500K+ accounts too • Projecting to hit **$15M by Dec'26 (potential to exceed)**	• $1-5M ARR • Growing 3-4x
	NRR & churn	• **3 logos churned ($280K CARR); 90% logo retention overall** given they are shedding SMB customers • NRR currently limited since most customers <1 year old	• 120%

	New Logo Addition	• Strong momentum - added **33 new logos since we met in May'25**; Strong **inbound motion working**
		  • 40% of leads are from perf. marketing; **9K per SQL, 30% conversion, $100K+ ACVs**
		• **Successfully moved upmarket – Avg ACVs of new logos** expanded from **$63K in Q1 '25** to **$130K in Q4**
		  • **Reducing focus on <$55K** accounts; 10 added in Q3 vs 8 in Q4
		  • On the other hand **increasing focus on $100K+ ACV (4 added In Q3 vs 6 in Q4)** and **$250K+ ACVs ($400K ACV closed in Q3 and $650K in Q4)**
			• Rate of growth of new revenue added – each quarter to be biggest

Operating efficiency	GM	• **30-40%**; **low** given expenditure to Twilio and other infra (Gemini, elevenlabs, etc) • Most voice companies today are in 30-40% range (E.g., Greylabs); GM will increase as token costs reduce	• GM = 80-90%
	Key ratios	• **CAC Payback <6 months**; *(CAC per $100K ACV lead is ~$9K)* • **Burning $400K/ month** – High on an absolute terms, but Burn multiple is <1 given CARR added of $500k - $1M. • **$8.2M in bank; 22 months of Runway left**	• CAC payback: <12 months • Burn multiple <2

1 **Competitor deep-dive on Assort Health;** Confido lags Assort traction by 3-4 quarters; %Live ARR, ACVs, and Implementation timelines are at par

- **Assort Health was at ~$10M ARR in Q2 2025**; 3-4 quarters ahead of Confido
  - **$0.7M → $9.6M ARR in one year** (as of Aug '25)
  - **Average ACV: $130K | Live revenue: $2.5M (1:4 live-to-CARR ratio)**
  - Upmarket momentum: 6 deals at $500K+ and 1 deal at $1M CARR in last 2 quarters
- **Go-Live Timeline**
  - **Contract to full deployment: ~6 months total**
    - **Initial go-live: 2 months** (Confido is at 3 months right now)
    - Phased location rollouts: additional 3 months
  - Standard implementations can even be <2 months - mostly configuring call patterns (similar to training a human); EHR integrations largely templatized
- **Pricing Model**
  - Mid-market specialty groups: ~$150K ACV (their Average ACVs)
  - Shifted from pure per-call pricing to flat-fee with minimum guarantees
    - Example: 15K calls/month base, $0.05/call overage (collected quarterly)
  - Confido currently at average ACV: $100K; Moving upmarket to match Assort

1 **Product feedback:** **Good NPS** and product at par with competitors; **Customers seeing early signs of labor replacement ROI**

Maria, CEO @ Forme

- $50K ACV account; Phased rollout ongoing

Sonny, VP @ VNA Health care

- This was a deal Confido lost to Clarion

Lynett, CEO @ SAMGI**

- $240K ACV – Was Confido's largest account in May
- *Churned in Q4*

Srinivas, COO @ Dallas Renal**

- $100K ACV
- Customer since Jan '24 – Gone live with 70% of revenue

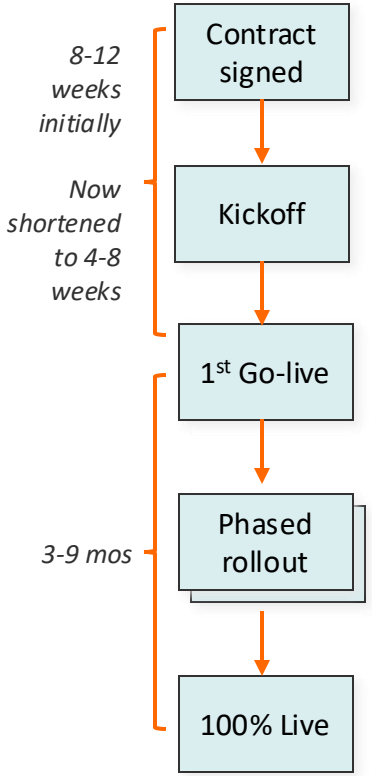
- + **9/10 NPS**
- Amongst the **best in class** "I evaluated 6 tools and it ultimately boiled down to Confido and Clarion. These guys definitely amongst the best especially at conversation handling"
- **+ Live to CARR expansion is successfully happening**
  - Confido handled 13% of DRG call in May, its now handling 40% of their calls which is 90% of the total agreed volume
  - Confido is at 70% live with Forme medical in 5 months. Strong NPS on go live
- + Direct impact to **cost metrics and staffing**
  - **1/3rd the price** ($8/hr vs $23/hr for staff)
  - *"I had a 2 member team and extra night call outsourcing – post confide I fired 1 FTE and stopped outsourcing"*
- + **Positive impact to revenue** and patient **experience**
  - "Predictable revenue now.. I get 60%+ confirmations prior to appointments which reduced no shows"
  - "I was so surprised.. 90% of people pick the bot option voluntarily instead of waiting for an agent"
- + **Consistency and visibility** into patient calls
- + Enables new use cases "I can now call patients post surgery which we never had bandwidth to do.. I'm hoping to find more such uses"
- + **Very sticky**; Integrating takes effort and wont replace unless it's a big 10x from competitors
- ? **Onboarding experience could be faster** – "It took a little longer than expected (3 months) to refine the system and scripts"
- ? **Fails at edge cases** where patients might ask it something that hasn't been configured in a talk script
  - "if you respond to a yes/no questions with something else... It will fail to understand and will either restart the conversation or say I didn't understand"
- **? Deeper EMR integrations needed (Via formal partnerships)** "We picked Clarion over Confido only because Clarion could write back to the EHR instantly, while Confido had a 1-2 min lag"
- ? **10x offering compared to human labour, but not a 10x to competitors** – most other AI companies sound similar and have the same capability. Customers we spoke to haven't evaluated others so this is very greenfield; ***Confido is at par with competitors***
- ? Conversational tone could be **more realistic** (good to have feature)

***marks chats that were done in May for the series A diligence*

2 **Live ARR at ~$1M** & lagging projections; **Integration complexity** and **limited FDE bandwidth** drove delays - now being addressed

Takes on **avg. 8-12 weeks to go-live, and 6 months to hit 80-100% of CARR** – In line with competitors; Delays primarily because of team bandwidth and non standard integrations

Confido's Implementations stages



- **Go-live initially took 8-12 weeks**. Particularly longer if complex and **first-time integrations** were needed to EMRs, phone systems, etc – ***dedicated FDE effort which was constrained***
- **Deployment speed is now improving to 4 weeks** - if it's a **EMR stack** that Confido has worked on and **templatised**
  - If not, it can take up to 8 weeks; FDE team bandwidth ramped up to 5 pods
  - Over last few months, seen a **2 week shrinkage** from **productising prompts & conversation handling**.
- **Confido is at par with** competitors like **hello patient and Clarion** timelines; **Assort has been able to go live faster** (consistently 4-8 weeks)

- Phased rollouts **heavily dependant on customer**
- Typically range **from 3-9 months based on number of locations and complexity of use case**
- Since this is a customer facing change, they don't rush it

Note: **Confido and Assort are both at 25% of Live ARR** to Contracted ARR; Assort is at $2.5M live out of $10M contracted.

Confido is **shortening Live ARR timelines** over time and has gone **100% live in <6 months** for a few customers

Examples of customer ramp up from slowest to fastest

Customer	ACV	Live ARR	Time to 70%+	How they scaled
DRG *(Slowest)*	$100K; Q1'25	$60K (60%)	**~10 mo**	**2-3 month EMR integration** followed by **gradual rollout across 13 sites over 7 months**
Vantage Medical	$100K; Q2 '25	$90K (90%)	~5 mo	Call volume expanded from 3.1K → 12.8K → 35.6K over 6 months; Primarily driven by expanding use cases from outbound to advanced inbound use cases
Forme Medical	$48K	$22K (45%)	Ongoing (50% in 3Mo)	Single location, scaling through workflow complexity;
Alpha Dental *(Fastest)*	$60K, Q3 '25	$60K (100%)	**~5 mo**	**Fastest location expansion** (18 sites in 5 months); **Go live of 4 weeks - Existing EMR integration** for Confido

2 **Ramping FDE setup to improve Live ARR;** Leveraging **India edge – 1 US FDE supported by 1 or 2 India junior FDEs**; Scaled this team to 5 pods and hiring strong ICs

Unique US + India FDE pod delivery model

Pod Structure

FDE (US)	Associate FDE (IN)	Ops Team	Customer Success

- Current Status:
  - 5 pods active, capacity $1M
  - Pod Cost: $250K (USA), $100K (India)
  - Allows you to share the expensive US resource across all accounts which having delivery managed by India FDEs
- Scaling the delivery model:
  - Self Serve Onboarding
  - Proprietary context engineering stack (Voice + Workflows + Evals)
  - Continue to leverage the offshoring/nearshoring advantage

Strong ICs hired recently to the FDE org

Name	Background
Manuel Pagliaruzza	Ex FDE at Invisible Technologies (>2yrs) and DoorDash, Masters in CS
Lester Coyoy	Ex trainer automation Engineer at TestRigor (>1 yr), Arcada Labs, Rocket.Chat
Pooja Rotti	Ex TPM at Massachusetts General Hospital and Deloitte
Nabeel Chhatriwala	Ex AI Engineer at Inhabit, TripleBind and ExxonMobil, Masters in CS from Georgia Tech
Punit Dhoot	Ex Senior PM at Slice, Associate at Goldman Sachs, B.Tech from IIT CS Roorkee

2 **Derisking Live ARR with minimum billing;** Since May, Confido implemented minimum billing across 90%+ contracts to drive more predictability; Some churn seen but no red flags

Minimum guarantees make live ARR more predictable and push customers to speed up go-live

Metric	Pre-May 25	May 25 – Dec 25
Total new logos added	22	33
Contracts with Minimum Billing	1	31
% of Contracts with Min Billing	**4.5%**	**93.9%**
Total ACVs added	$1024K	$3314K
$ value covered under minimum billing	$42K	$1191K
% of ACV with Min Billing	**4.1%**	**35.9%**

Confido had **low negotiation power initially for MBs**; **Now** with **larger enterprise logo reputation**, they are able to command it.

Confido churned $287K; SAMGI was the largest customer due to org restricting; Rest were <$50K ACVs they allowed to churn

Customer	Type	Locations	ACV	Rationale
SAMGI	Group Practice	45	$240K	This was one of their largest customers – very strong product feedback in may, but churned because of org Restructuring from a PE sale
Dental Customer	Single Practice	1	$18K	NA; Reduced focus give <$50K ACV
Dental Customer	DSO	7	$29K	NA; Reduced focus give <$50K ACV

In addition to the above, Confido has **intentionally churned 10 customers which are <$20K accounts** as they are no longer the right ICP

3 **Team:** Team has ramped up well with strong L-1s; Good hires in the US with domain expertise

Key Hires (L-1 Team)

Gaurav Mohta (Head of Product)

Ex Senior Director of PM at Innovaccer, VP PM at Lybrate

Well ref'd from Innovacer; on Contract to evaluate

Simran Parikh (Director of Customer Success)

Ex Senior Consultant at Guidehouse, MPA from NYU

Saket Kanth (VP of Product)

Ex Head of Product at Antara Health

Hammond Pereira (VP of Engineering)

Ex Head of Engineering at Augnito, ex Head of Backend Engineering at Dream11

Strong refs: Top engg. talent @ D11

Raihan Faroqui (VP of Partnership)

Ex Head of Clinical Strategy and Partnerships at Guaranteed, BA Cornell and MD

Strong refs: Top 1%ile

Mitchell Stabnor (Director of Marketing)

Ex SE at Synchron, BS CS from Grinnel

Garima Sharma (Talent Head)

Ex Turing, Revolut and ShareChat

Good refs: Top 10%ile

Actively building a strong FDE team

Gaurav Mohta

Ex SE at Synchron, BS CS from Grinnel

Manuel Pagliaruzza

Ex FDE at DoorDash, Masters in CS

Lester Coyoy

Ex Solutions Engineer at VWO, Ex RocketChat and TestRigor

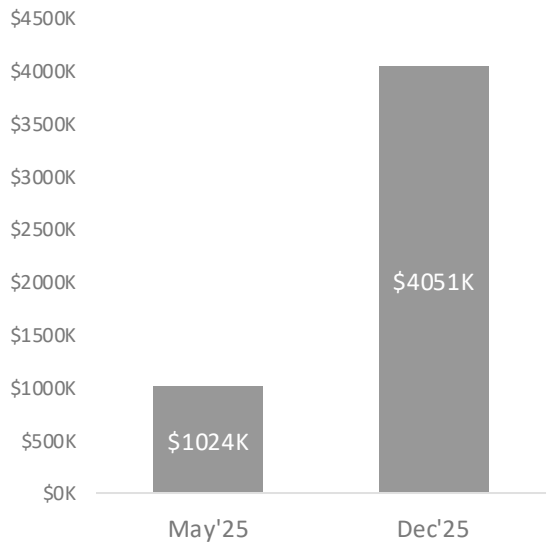
*Except Simran and Saket, the rest are new hires in the last 6-7 months

Projections: We can underwrite $8.5M by Q2 '26; $15M by Dec '26 dependent on additional GTM motions working

Strong growth in past year; Proven ability to close $2M/ quarter

Actual

ARR Growth May'25 to Dec'25



- 4x growth in contracted ARR $4M in Dec'25
- **Proven ability to close $2M/ quarter**; **Early signs** of being able to **close $1M/ month**
- **Live revenue @ $751K in Dec '25** and as of **Mid Jan its $1M**; lags by 2-3 quarters and needs to improve

Confido projected to hit $14-15M in FY '26; Confident path to $8.5M by Jun '26 based on existing pipeline momentum; In order to hit $14-15M, a few more GTM channels will need to fire.

	Actuals	*Projected*			
	Q4 25	**Q1 26**	**Q2 26**	**Q3 26**	**Q4 26**
Best Case					
CARR ($M)	**$4.05M**	**$6M**	**$9M**	**$13M**	**$18.9M**
ARR ($M)	2.02	$2M	$3.1M	$4.1M	$6M

MM ($100K ACVs)	*$1.0M 6*	$1M 10	$1.5M 15	$2M 20	$3M 30
ENT ($500K ACVs)	*$0.6M 1*	$0.5M 1	$1.2M 2	$1.8M 3	$3M 5
Base Case					
CARR ($M)	**$4.05M**	**$6.00M**	**$8.50M**	**$11.60M**	**$14.80M**
New ARR ($M)	$2.02M	$2.00M	$2.60M	$3.20M	$3.30M
SMB ($50K ACVs)	*$0.34M 8*	*$0.50M 10*	*$0.40M 8*	*$0.30M 6*	*$0.00M 0*
MM ($100K ACVs)	*$1.02M 6*	*$1.00M 10*	*$1.20M 12*	*$1.40M 14*	*$1.80M 18*
ENT ($500K ACVs)	*$0.65M 1*	*$0.50M 1*	*$1.00M 2*	*$1.50M 3*	*$1.50M 3*
Worst Case					
CARR ($M)	**$4.05M**	**$6M**	**$7.8M**	**$9.5**	**$11M**
New ARR ($M)	$2.0M	$2M	$1.9M	$1.8M	$1.6M
SMB ($50K ACVs)	*$0.3M 8*	*$0.5M 10*	*$0.4M 8*	*$0.3M 6*	*$0M 0*
MM ($100K ACVs)	*$1.0M 6*	*$1M 10*	*$1M 10*	*$1M 10*	*$1.1M 11*
ENT ($500K ACVs)	*$0.6M 1*	*$0.5M 1*	*$0.5M 1*	*$0.5M 1*	*$0.5M 1*

Best Case

Bull case where **all 3 GTM channels are firing** – generates 3X **~2 enterprise logo/ month**the MM logos In Q4 '26 along with; Enterprise logo addition will need the **PE GTM to work across 2-3 PEs**

Base Case

Assumes Confido **doubles MM logo addition by Q2** – possible with **current momentum**; **Q4** targets will **require outbound and events** GTM to ramp up. Assuming 1 enterprise logo per month, by **penetrating one more PE portfolio**

Best case

Worst Case

Confido's momentum broadly stays the same as Q4;
Slow down in the SMB segment assumed across all scenarios as they are reducing focus here

GTM motion: Current GTM motion adds $1.5M per month to pipeline and with this momentum can hit $8-8.5M by Q2 2026; Need to unlock more GTM channels to hit Q4 '26 targets

- **Adding $1.5M/month to pipeline**; **Current pipeline at $6M** (Oct'25: $4.2M → Nov'25: $5.4M → Dec'25: $6M)
- 3 key channels today – **TOFU is ads/performance marketing heavy**; Enterprise logos come via WOM or PE referrals
  - **Ads: 40%, Events: 27%, Partnerships** (incl. PEs): **30%,** WOM: 1%
  - **Performance** marketing: **$9K per SQL, 30% conversion, $100K+ ACVs**. Spending $80-100K; scalable to $200K with CAC/LTV intact
  - **PE motion showing early signs**: 2 Gryphon portfolio deals closed; replicating across other PEs (**experimental, no clear playbook yet**)
- **Win rates: 30% across historically**; PE and partnerships higher at 66% & typically $250K+ ACVs
- **To hit $14-15M FY26 target**: Need **$25-30M pipeline over next 12 months** at 30% win rate

2026 Projections

	Q1 '26	Q1 '26	Q1 '26	Q1 '26
CARR ($M)	**$6.00M**	**$8.50M**	**$11.60M**	**$14.80M**
New ARR ($M)	$2.00M	$2.60M	$3.20M	$3.30M
SMB ($50K ACVs)	*$0.50M* *10*	*$0.40M* *8*	*$0.30M* *6*	*$0.00M* *0*
MM ($100K ACVs)	*$1.00M* *10*	*$1.20M* *12*	*$1.40M* *14*	*$1.80M* *18*
ENT ($500K ACVs)	*$0.50M* *1*	*$1.00M* *2*	*$1.50M* *3*	*$1.50M* *3*

GTM motion to hit targets

H1 Path (High Confidence)

- **MM**: Current performance marketing motion can scale to support 10-12 logos/quarter. Ramp spend to $300K = 30 leads → 10 deals/quarter at 30% conversion
- **ENT**: 2 Gryphon portfolio companies closed; potential for 4 more logos

H2 Path (Requires Scaling)

- **MM**: Need outbound + events playbook; performance marketing economics won't hold at 50+ leads/quarter. Early outbound shows 20% lead-to-SQL; need dedicated talent
- **ENT**: Expand to 1-2 more PE partners; Coppermine PE in pipeline

Existing pipeline of $6M; Increasing focus on performance marketing and events to build pipeline over next 2 quarters

Current pipeline of $6M (Dec '25) – healthy mix of enterprise logos from Events, partnerships and ads; Pipeline snapshot below:

Channel	ACV ($K)	Expected Close Date	Deal Name	Deal Stage
Events	$500	Q4 2025	btyDental	Proposal Submitted
Partnerships	$500	Q1 2026	Aqua Dermatology	Product Demo Conducted
Partnerships	$500	Q1 2026	PRN Physical Therapy	Product Demo Conducted ***– Closed in Jan***
Ads	$400	Q2 2026	VNS Health	Proposal Submitted
Events	$225	Q1 2026	Heart + Paw	Product Demo Conducted
Events	$225	Q1 2026	CuroPets	Product Demo Conducted
Events	$210	Q1 2026	West Coast Dental - New Deal	Proposal Submitted
Ads	$200	Q4 2025	Riverside Healthcare	Product Demo Conducted
Ads	$180	Q1 2026	Contemporary Care	Proposal Submitted
Events	$150	Q2 2026	Nephrology Associates Medical Group	On Hold
Ads	$120	Q4 2025	Skin & Vein Center	Proposal Submitted
Ads	$113	Q2 2026	Progressive Dental	Product Demo Conducted

Pricing: 8-10X NTM on CARR is a reasonable valuation; 12-15X valuations are premium pricing we're seeing in the US

Few examples of recent rounds in AI:

- Healthcare
  - **Coral AI** @ $1.5M CARR, $750K live; Raised 10M @ $62M post (underwrote $5-6M CARR in next 6 months)
  - **Rapidclaims** @ $500K CARR, raised 8M @ ~30M post
  - **Assort** @ 2.5M CARR, Raised 26@120 from First Round, Chemistry [US deal]
    - 50@750 post later from lightspeed at 9.6M CARR
  - **Hello Patient** @ 2.5M CARR ($500K Live) raised 22.5M @ 110M post from 8vc, Bling capital [US deal]
- Portfolio raises
  - **Greylabs** - $900K, 9M @ 50M post from Elevation
  - **WizCommerce** - $800K, 6M @ 36 post from Stellaris
  - **Atomicwork** - $500K, $25 @ 115 post from Khosla
  - **Rocketlane** - $150K (3 mo of launch), $18M @ 82 post
  - **SuperOps** - $350K, $14M @ 50 post
- Other market raises
  - **Avoca** raised from Nexus at $40M post when they were at 300K; Grew to 7M in a year and raised at $250M post
  - **Maximor** - $150K, raised 8M @ 35M post from foundation
  - **Further AI -** $1M, raised 25M @ 100 post from A16Z
  - **Portkey -** $2M, raised 18M @ 80 post from Elevation
  - **GigaML -** <$1M, Raised at 350M post from Redpoint (closed $500K ACV deals against Sierra and Decagon)

Investment considerations and risks

- **Investment Opportunity**
  - $2.9M @ $10M Seed from Together and DeVC; Raised Series A of $9M @ $34.5M post in May ‘25 from Blume, Together and DeVC
  - DeVC has invested $2.1M and currently own ~6.6%
  - Potential to shape $8-10M convertible (20% discount to next round)
- **Investment considerations**
  - Backing hacky and iterative founders with strong intrinsics
  - Strong growth and demonstrated PMF with mid market and enterprise segment
  - Large TAM and greenfield opportunity – Land grab and need to move fast
  - Potential shot at category leadership: built a good product, at par with competitors
- **Investment risks**
  - GTM scaling unproven for outbound and PE motion
  - Live ARR gap remains a risk – needs to shrink further
  - Tech democratisation might lower barrier to entry

Appendix

Recap - What does Confido do? AI agents to handle front office calls across appointment mgmt., patient communication and support, clinical coordination, etc.

Confido's **AI agents** handle **front-office calls from patients to providers** which incl. appointment scheduling, follow-ups, queries, etc.

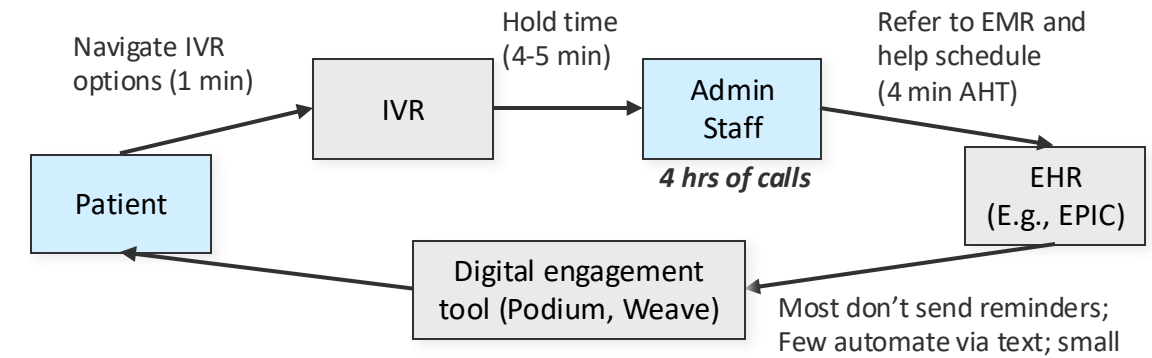
- **Front office staff** in the US handle **100 calls a day each** from patients (~3-4 hours). see table below.
  - This is in addition to their admin paperwork, patient intake etc.
- Confido **automates these inbound and outbound calls** thought an AI voice bot.

Type of calls handled by Confido

Pre-Appointment *(50%+ of call volumes)* *Inbound & outbound calls*	• **Appointment Management**: Handling queries, scheduling, routing and reminders. ***(Most common use case today)*** • **Patient Queries & Follow Ups** • **Insurance Verifications**: Verifying patient insurance details before appointments.
Care Management *Mostly outbound calls*	• **Post Procedure Care Outreach**: Follow-up care and feedback. • **Payment Processing**: Reminders for payments and transactions.
Post-Appointment *Mostly outbound calls*	• **Follow-ups**: Reminding patients about appointments follow-ups. • **Post-Discharge Monitoring**: Checking on patient condition post-discharge

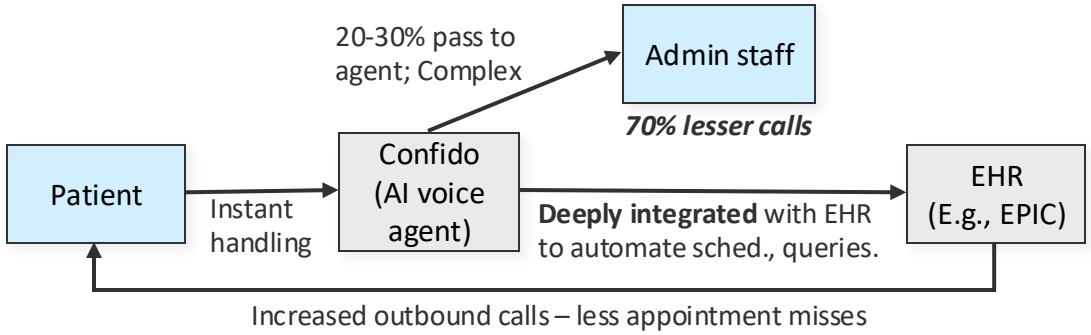
Current patient communication stack is inefficient and broken; Confido **automates using voice + deep integrations** with existing stack

Pre Confido *~10min call, 16% call drop offs, high load on staff, missed appointments*



IVR + digital engagement platforms are low ticket tools (<$50K)

Post Confido *Instant call handling, 70% lesser staff load, appointment reminders*



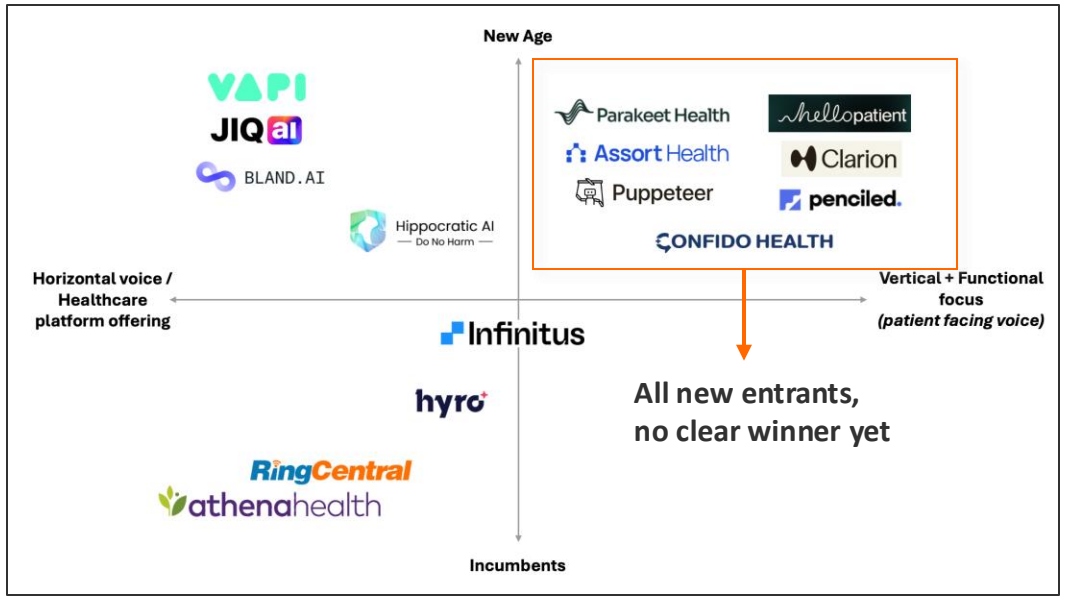
Recap - Market: Clear why now and an urgent pain point for healthcare COOs

- Why now?
  - **Pre-voice AI**, **hospital used IVRs** (NICE inContact, Avaya) and **digital patient engagement** apps like Podium, Weave, etc. to **reduce call load**. The latter only handled 10-12% of appointment scheduled and hence were only used for text marketing and appointments.
  - **Tech advancements at foundational layer** allowed for companies to build contact center agents which **converse in healthcare settings**
    - **Post 2023** - Companies like **Deep gram** (Nova-2, Sept '23), **Assembly AI** (PII/HIPAA compliant in Dec '23), and **Cartesia** developed **healthcare specific speech recognition models** – better handling of medical lingo, understanding patient intent and providing more nuanced responses
    - Companies could also reduce response latency to <800ms
- **ICP is a COO at a physician group or Health System**
  - **100-200 inbound calls** are typically handled **per admin staff member** – 50% are appointment related (confirmation, scheduling, etc.), 25% are general queries on lab, billing, location, etc. and the remaining could be clinical in nature around reports, prescriptions and so on.
- This is a **top 3 pain points for the COO** because
  - **High attrition for admin staff**: ~45% turnover in this role, and it takes 3-4 weeks of training for new employees; Constant cycles to get employees trained on phone.
  - **No bandwidth, broken process**; Especially important post care checkups, pre appointment reminders which are revenue generating get impacted.
    - DRG gets 40,000-50,000 calls/month across 12 centres; Pre confide, would get <50% appointment confirmations and that has increased to 60%+ now
  - **Bad patient experience**: Long wait times and varied interactions; "I don't know what patients were calling for and what we're staff were saying"
  - **Expensive to staff call centres**: "$23/hour, and everyday we do at least 4 hours of inbound calls per person In smaller clinics" - SAMGI
    - Confido cuts costs by up to 3x with $8/hour automation.
- A Physician group like **SAMGI** (Est $50-100M revenue, 70 locations) **spends $3M on labour spend to manually handle calls**
  - This could go up to 10-15M on average for a health system ($500M revenue)

Recap - Market: Massive TAM and greenfield opportunity; Assort and Hello Patient will be the key competitor to watchout for

Large TAM and greenfield opportunity; Multiple new age players focused on front office and the market is <5% penetrated.

- **TAM is massive - $100Bn spent on front office staff** in the US (10-15%) out of $1.1T US Administrative spend; Confido currently addresses **$15-20B SAM today** (3.2 billion patient phone calls).
- **Healthcare specific AI contact center space is new** (~3 years old) and **there are no clear winners** yet – **Assort is the most well funded and ahead.**



Almost all health systems are greenfield today with less than <5% adoption across the industry

Recent smart money investments in the space; Assort and Hello Patient are Confido's most relevant competitors today

Name (Founded)	Funding Status	Investors	Comments
Assort Health (2023)	$100M @ $750M Series A, Aug '25	Lightspeed, Tau Ventures	Most popular and highest traction in this space. Good product NPS
Hello Patient (2024)	$22.5M @ 100M Series A, Sep '25	Scale, 8VC	Good product and replacing Assort in a few deals. Similar scale as Confido
Parakeet Health (2023)	$3M Seed, Oct '24	Canvas VC	Voice agent + call automation. Easy deployment + good UX; weaker on enterprise-grade customization
Clarion (2023)	$0.5M Seed, 2024	YC	More payer-side. Focused on claims, auth, and payer-side automation. Good RCM backbone but not dedicated
EliseAI (2021)	$110M Series D, Aug '24	Sapphire, Point72	Started with real estate call automation. Now expanding to healthcare. Products needs maturing
Hippocratic AI (2022)	$278M Series B, Jan '25	Premji, GC, a16z, Greycroft, KP	Primarily focussed on mid/back office workflows like Prior auth. Front office adoption low.
Hyro (2014)	$50M Series B, Dec '24	Healthier, Macquarie	Started as a chat agent on websites, phone. Weaker adoption for deep scheduling or triage w/ voice

Most relevant competitors -> Sub scale -> not front office focussed

BRCs: High energy, entrepreneurial founders with IPO scale ambition; GTM capability untested

References from

- Mayank Singh (Tech member @ Dronation)
- Gaurav Lakhwani (Angel/Advisor @ Enercomp)
- Jatin Patel (Director @ Enercomp Solutions)
- Mit Mehta (Founding member @ Burncal)
- Anik Agarwal (ex-Cofounder @ Burncal, Confido)
- Kunal (Ex-CTO @ Confido, also Co-founder/CTO @ Burncal)
- Will Nevers (Fractional CRO @ Confido)

BRCs on Chetan

+ Entrepreneurial
+ "All or nothing attitude"
+ Thoughtful leader; mature for his age
+ IPO scale ambition from day 1
+ Strategic and thoughtful
+ Takes bold steps
+ Resourceful
+ Hard working and dedicated
+ Sales oriented
+ Iterative – work fast fail fast mentality
+ Focussed on team building
+ Admired by the team
+ Followership and referenceability
? Frugal mindset – pay for the best
? Hustle first on sales
? GTM – bad sellers, underconfident (ex-CRO ref - pinch of salt)

BRCs on Vichar

+ Deep Product Intuition – built strong products at Burncal, Dronation
+ Detailed oriented
+ very outside in
+ Analytical
+ Learning; constantly consuming
+ Complementary to Chetan - Bold + idea guy
? Overanalyses - needs to be more 80/20

BRC from Manav (Advisor and Angel): Evolution since May '25

- **+ Strong vote of confidence** - "If I had to bet on the three founders to win this race - I would bet on Chetan"
  - Jon of Assort Health is the more outward facing CEO - he isnt focussed on building a scalable org and it might fall apart at some point. Alex of Hello patient is more in the middle
  - Chetan stands out and good balance of both
- **+ Confident of Chetan hitting $20M**
- **+ Bullish on Confido space** - a lot happens on voice in healthcare - real need. And its one of those spaces that the EMRs dont see as an immediate thread.
- **+/? Commodity product but not a deterrent** - "honestly between confido, assort and HP - I dont see a difference"; distribution wins in this space and it's always been the case for healthcare.
- **+/? Live ARR to CARR gap is normal;** Seen the same in Assort, Hippocratic, etc
- ? What he needs to work on
  - **? Get polished on GTM**. Needs to learn the art of wining and dining buyers and come off as a larger company when selling to enterprise
  - **? short term thinking vs long term at the moment** - "I dont blame him for it, it's how I was too and you evolve".
  - **? Ruthless prioritisation**. Need to take a few concentrated bets across product roadmap, GTM, etc. Starting to see early signs of this - he's saying no to smaller customers, etc.

Recap - DeVC community members views: Spiky founders, showing great trajectory and constantly beating plan; PMF and scalable GTM were areas to be tested further

Name	Vote	Summary views
Ashwini	Yes	Clear YES — Strong potential, fixable gaps
Vikram	SMB	Very positive & push to pre-empt; GTM risk
Aakrit	SMB	Likes team & traction, valuation cautious; Dig deeper into Curis
Nitin	SMB	Sees PMF, fast sales cycle.
RA	SMB (caveats)	Should pre-empt and commit; Validate PMF
Aakash	SMB	Spiky and very thoughtful, strong trendline, iterating and beating plan – should pre-empt

Overall summary IC views

+ Spiky = 1
+ Maturity
+ Resourcefulness
+ Growth mindset. learning fast, iterating quickly
+ PMF Indicators - Fast sales cycles (1 week), strong land-grab momentum.
+ GTM focussed
+ Trajectory - Constantly beating plan,
+ Compounding learnings from past ventures (BurnCal, Dronation)
+ Thesis – multiple macro tailwinds
+ India RTW - **implementation-heavy workflows**
? Revenue recognition (Booked vs. Live) is concerning; Split house – "feature not a bug in healthcare"
? Dig deeper in Curis relationship – how did this happen?
? GTM – Heavy reliance on early partners vs direct motion
? **Customer references** missing – true PMF

Link to IC note

Partner feedback (2/2): GTM partners also have high NPS - **Early signs of working partnership motion**; **scalability** of this motion is a **TBD**

Partners we spoke to
(2/3 major partners)

1. Ankur Bansal, Founding team@ HCLS (Healthcare services partner)
2. Ruchir Mehta, Co-founder @ Remedo (Dental market platform)

Overall positive feedback from partners who will continue working with confide; TBD on if Confido can onboard more partners in a scaleable manner

+ **Always** positive feedback from customers

+ "Confident they will dominate the healthcare contact centre space"

+ Builds mutual relationships – "Give and take where they have also give us some leads"

+ **Positive on their GTM Strategy** – partnerships are common in healthcare and very important. Even event GTM motion is good – you can make money just off this channel and Confido is going it well

+ **"Have good logos and helps to close sales faster – especially in dental"**

+ **Land Grab opportunity -** strong entry point and need to expand rapidly

+ Right **intrinsics – hustle, relationship building**

+ **Team & Execution** hiring domain experts to the team

+ **Post-Sales Delivery i**s strong, despite some bandwidth constraints.

? **Risk of commoditisation -** currently in a greenfield market, but need to expand into other parts of the stack.

? **Constrained by tech bandwidth – need to ramp to avoid** post-sales deliver delays

Competitor analysis: Go-live timelines for competitors are in the 3-month range; Assort has seen faster 2 month implementation

Vendor	Average Timeline to Go-Live		Customer sentiment on pace	
Assort Health	**~2 Months** (Range: 10 days – 3.5 months)	"signed the contract to the time we went live was about three and a half weeks",	**Fast:** Pre-built EMR integrations (e.g., Athena) allow "flip of a switch" deployment.	"integration with athena was huge... didn't have to start from scratch"
(Assort Exception)	**Exception:** Complex retina specialty builds can take ~3 months due to specific clinical rules.	"January through April was the designated build-period... nuances to retina scheduling"	**Delay:** Specialty-specific logic (e.g., injection cycles) requires custom algorithm training.	"work with them on training their bot to be able to manage the specific use case"
Hello Patient	**~3 Months** (Range: 2 – 3 months)	"Implementation takes a mere two months... building and configuring the system"	**Fast:** Implementation timeline often beats sales pitch estimates.	"implementation timeline was faster with Hello Patient from what the sales team had pitched"
(Hello Patient Exception)	**Exception:** Early adopters experienced longer timelines while core product was being built.	"probably took a quarter... they were definitely building as we flew"	**Delay:** Simultaneous product development during deployment.	"still building the core product happening when we were doing that"
Hyro	**~3 Months** (Voice/Deep Integration)	"With the Epic interface... probably say that one was maybe three months"	**Fast (Chat):** Chatbots deploy rapidly (2 weeks) due to content scraping capabilities.	"set up the first rendition of that chatbot just within a couple of weeks"
(Hyro Exception)	**Exception:** Voice AI requiring Epic integration takes longer than simple web chatbots.	"definitely longer than without the Epic interface. That's pretty much expected."	**Delay:** Closed API environments (like Epic) require complex workarounds or manual exposure.	"Epic's APIs are unable to be accessed... require more manual overload for us",
Clarion	**~3 Months** (Targeted)	"wanted to at least roll and go live within 90 days"	**Fast:** Real-time integration with EMRs (e.g., Epic) speeds up technical deployment.	"Clarion had an advantage... direct connect, real-time integration with our emr"
(Clarion Exception)	**Exception:** Full multi-site rollout can extend to ~8 months due to deliberate pacing.	"took us just under 8 months to go live with all 21 locations"	**Delay:** Strategic "soft rollouts" to identify bugs before system-wide launch.	"ones that said, let's take our time... did kind of a soft rollout"
EliseAI	**12 – 18 Months**	"Signed... last year in January... We're still not actually live [March 2025]",	**Delay:** Struggles with complex data gathering (insurance, demographics) and high accuracy bars.	"system was still struggling with insurance numbers and names and a few other quirky details"

Competitor analysis: Pricing models – Assort has mostly moved to a flat call bank pricing; Hello Patient and Confido are still more usage-based pricing heavy

Vendor	Pricing Model & Structure	Customer Chat Excerpts	Company Attribution
Assort Health	**Hybrid / Call Bank:** Flat monthly or annual fee covers a specific volume "bank"; overages charged per call.	"monthly subsea for each office. That gave us a bank of calls... If we went over... paid in overage"	**Shared Practices Group**
	Dental DSO Rate: ~750/*month/office∗∗coveringspecificcallbank;overagesat∗∗* **2.00/call**.	"comes down to about $750 a month per office... flat fee per month... went over... charged at a little more than $2 a call"	**Shared Practices Group**,
	Ortho Practice Rate: 60*k*–**70k/year** for **~2,500 calls/mo**; renegotiated to **~$150k/year** for **unlimited**.	"original price... between $60K to $70k a year... handled about 2,500... renegotiated... closer to $150,000 [for unlimited]"	**Barrington Orthopedic Specialists**,
	Retina Practice Rate: Flat fee covers **~15,000 calls/mo**; low overage fee (**$0.05/call**) above cap.	"handle up to just under 15,000 calls a month. Anything above... charged at $0.05 a call"	**NorCal Retina**
	Dental Group Rate: ~$500/month/location with bundled discount (10-15%).	"close to $500 a month per location ended up being the yearly amount with a 10%-15% discount"	**4M Dental Implant Center**
Hello Patient	**Usage-Dominant Hybrid: ~25%** base platform fee + **~75%** variable usage fees based on interaction type.	"platform fee is probably about 20%-25% and the remainder... is broken down by the usage"	**University Radiology**
	Radiology Rate: 100*k*–**300k/year** for **~1,300 interactions/week**; per-transaction cost is **<$1.00**.	"spending roughly between $100,000 and $300,000 a year... paying less than $1... broken down by the methodology"	**University Radiology**,
	Hospital Outpatient Rate: <$100k/year estimated based on transaction volume/calls.	"expected to be under $100,000 annually... It's the number of calls, transactions that are going through the system"	**CortiCare**

Competitor analysis: Product quality is similar across players; Companies are winning on servicing, pricing, integration in bake offs.

Deal loss analysis for competitors

- Most commonly sighted reasons for loosing deals are “unwillingness to customise”, “pricing”, “pace of implementation/ deployment”. This indicates that **product quality is similar across players** and you’re **winning on servicing, pricing, integration** in bake offs.
- **Assort Health**
  - Lost to Flip AI (TrustCare Health): "Aggressive" sales tactics. Flip offered more functionality for the price.
  - Lost to Hello Patient (CortiCare): **Lost** because **Hello Patient offered superior customization** and deeper analytics/reporting. “Assort wasn’t willing to build custom requests”
  - Lost to Genesys (Healthtech Company): Lost customer because Assort was "very niche" and intent-focused, **failing on broad, general conversations**.
  - Risk of Loss to Dentina.Ai (Shared Practices Group): Faces pilot threat as **Dentina is 40% cheaper; Assort refused to budge on price**
- **Hello Patient**
  - Lost to Assort Health (Shared Practices Group): Lost the DSO deal because they were **unwilling to build custom features**; sales pitch was too rigid.
  - Lost to PolyAI (DSO/Pacific Dental Services): Lost during evaluation; was less transparent about the roadmap and was not as analytics-driven as PolyAI.
- **Elise AI**
  - Lost to Assort Health (Healthtech Company): Lost the client (who later churned from Assort) **primarily because Elise had significant development delays.**
  - Almost Lost to Smaller Vendor (Dermatology Partners): Customer temporarily engaged a smaller vendor when **Elise was "not making progress"** on initial features.
- **Parakeet Health**
  - Lost to Assort Health (Luminary Hospice): Lost the hospice customer due to Assort's better AI **quality in clinical conversations** and **streamlined EHR integration.**
  - Lost to Assort Health (Prior Customer): Integration was manual, taking 3.5 weeks, compared **to Assort's 10-day quick pilot deployment**.
  - Lost to Hyro/Outbound AI (VNA Health Care): Lost due to **rigid pricing;** demanded a per-user, per-agent fee over a flat fee.

Strong ICs hired for engineering and FDEs

Name	Current Role @ Confido	Last Relevant Work Experience	Education
Abhishek .	Product Architect	Sr Software Engineer → Product Architect · **Eltropy** · ~3.5y	IEM · 2019

Product requests/ need gaps that customers want

**Based on Tegus interview transcripts. Not confido specific*

- **Revenue Cycle Management (RCM) & Financial Automation**
  - Payment Collection: DSO VP - "AI should just take the payment instead of transferring."
  - Prior Auth & Benefits Verification: Customers explicitly want solutions that can perform prior auths and benefits verification by making calls to payers (Blue Cross, Aetna, etc.). While Hello Patient can already do this, it "stumbles after much more complexity" and defaults back to a human agent for documentation issues
  - Billing/Claims Resolution: Leaders call this the "biggest challenge" and ideal for automation – *Utopian ask because payers wont open engage with an automated bot atleast in near term*
- **Deeper EMR Workflow Integration**
  - Create EMR Cases from Voicemails: Customers want the AI to automatically create a patient case in the EHR (like athena's patient case feature) that can be managed by a nurse via text, avoiding phone tag.
  - Smarter Scheduling Logic: DSO VP: "If the first slot fails, AI shouldn't dump it back to staff."
- **Advanced Analytics & Usability**
  - Caller Sentiment Tracking: TrustCare COO: "Managing 100 calls means nothing if 90 leave angry."
  - Built-In A/B Testing: Telehealth PM: "Need native A/B testing, not vendor-pulled reports."
  - Full-Funnel Analytics: DSO VP: "We want analytics on *all* calls, not just AI-handled ones."
- **Unified Communication Platform (Phone, Fax, Text, Web)**
  - Outbound Communication Expansion: Customers want the AI to perform more varied outbound functions such as messaging/ calling regarding low-risk medical care follow-ups.
  - Referral Management (Phone + Fax + Web): Retina CAO: "Take over the whole referral flow." – *Not a homogenous ask since it sits with separate teams today*

Product roadmap

Front Office Outbound

1. Scheduling
2. Apt Confirmations
3. Cancellations/ Rescheduling

Expanding into Mid Office

1. Pre/Post- Ops Care
2. Prescription Refills
3. Chronic Care Management
4. TCM/ Discharge Follow Ups

Back Office Payor Facing

1. Denial & AR Management
2. Prior authorizations
3. Claim Follow Ups

Front Office Inbound

1. Waitlists/ Recalls
2. Patient inquiries
3. Patient Intake
4. Clinical Triage

Back Office Patient Facing

1. Eligibility & Insurance Verification
2. Patient Statement
3. Payment Collection & Reminders
4. NOAs, Referral and Fax-based Calls
